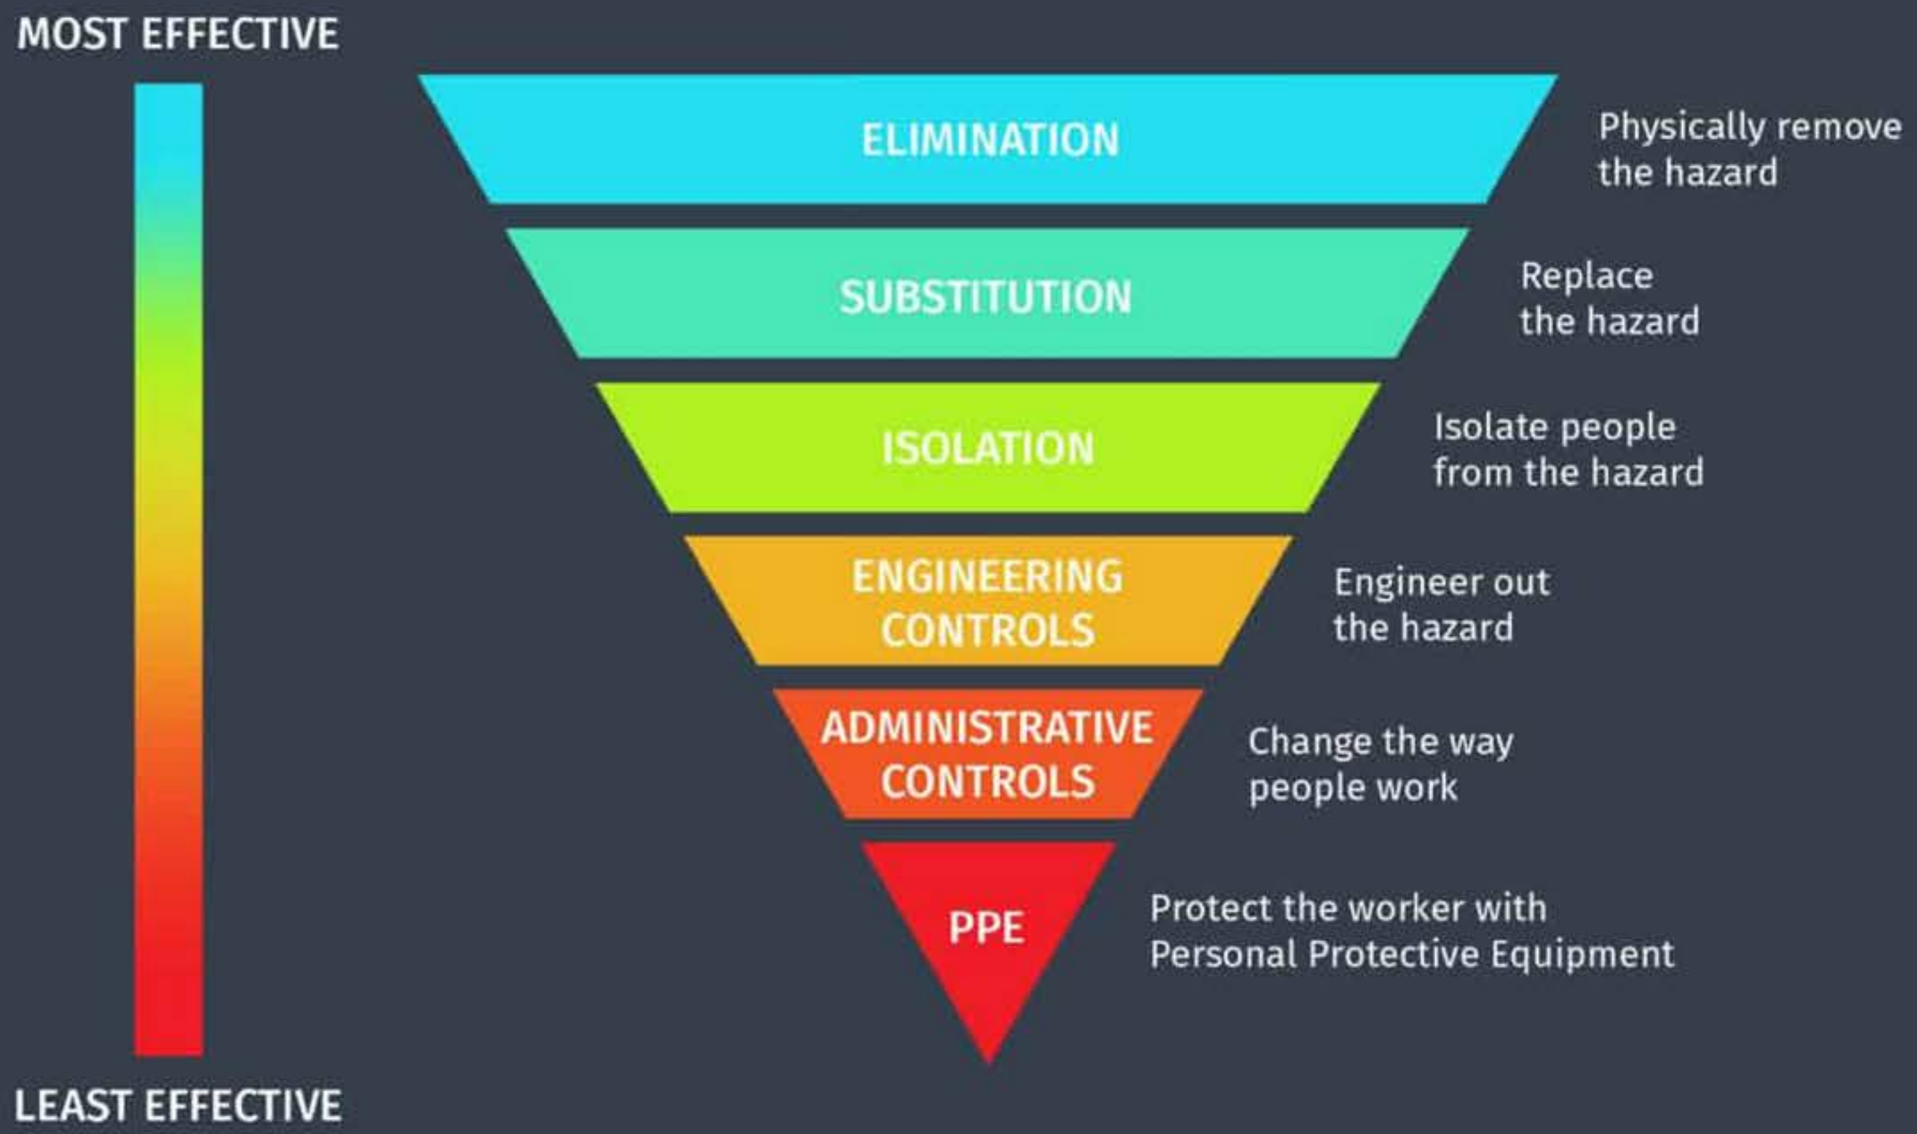
HEIRARCHY OF CONTROLS

How do we know the controls in place are sufficient to safely undertake the activity?

HIERARCHY OF CONTROLS



ELIMINATION

- Physical removal of the hazard
- Effective during design or planning
- E.g. complete activity at ground level rather than at heights

SUBSTITUTION

- Substitute hazards with a safer option
- E.g. excavation with vacuum excavation rather than excavator

ISOLATION

- Physically isolate people from the hazard
- E.g. concrete barriers to protect workers from road traffic

ENGINEERING CONTROL

- Put in place a system to engineer out the risk
- E.g. ventilation when working with dangerous chemicals

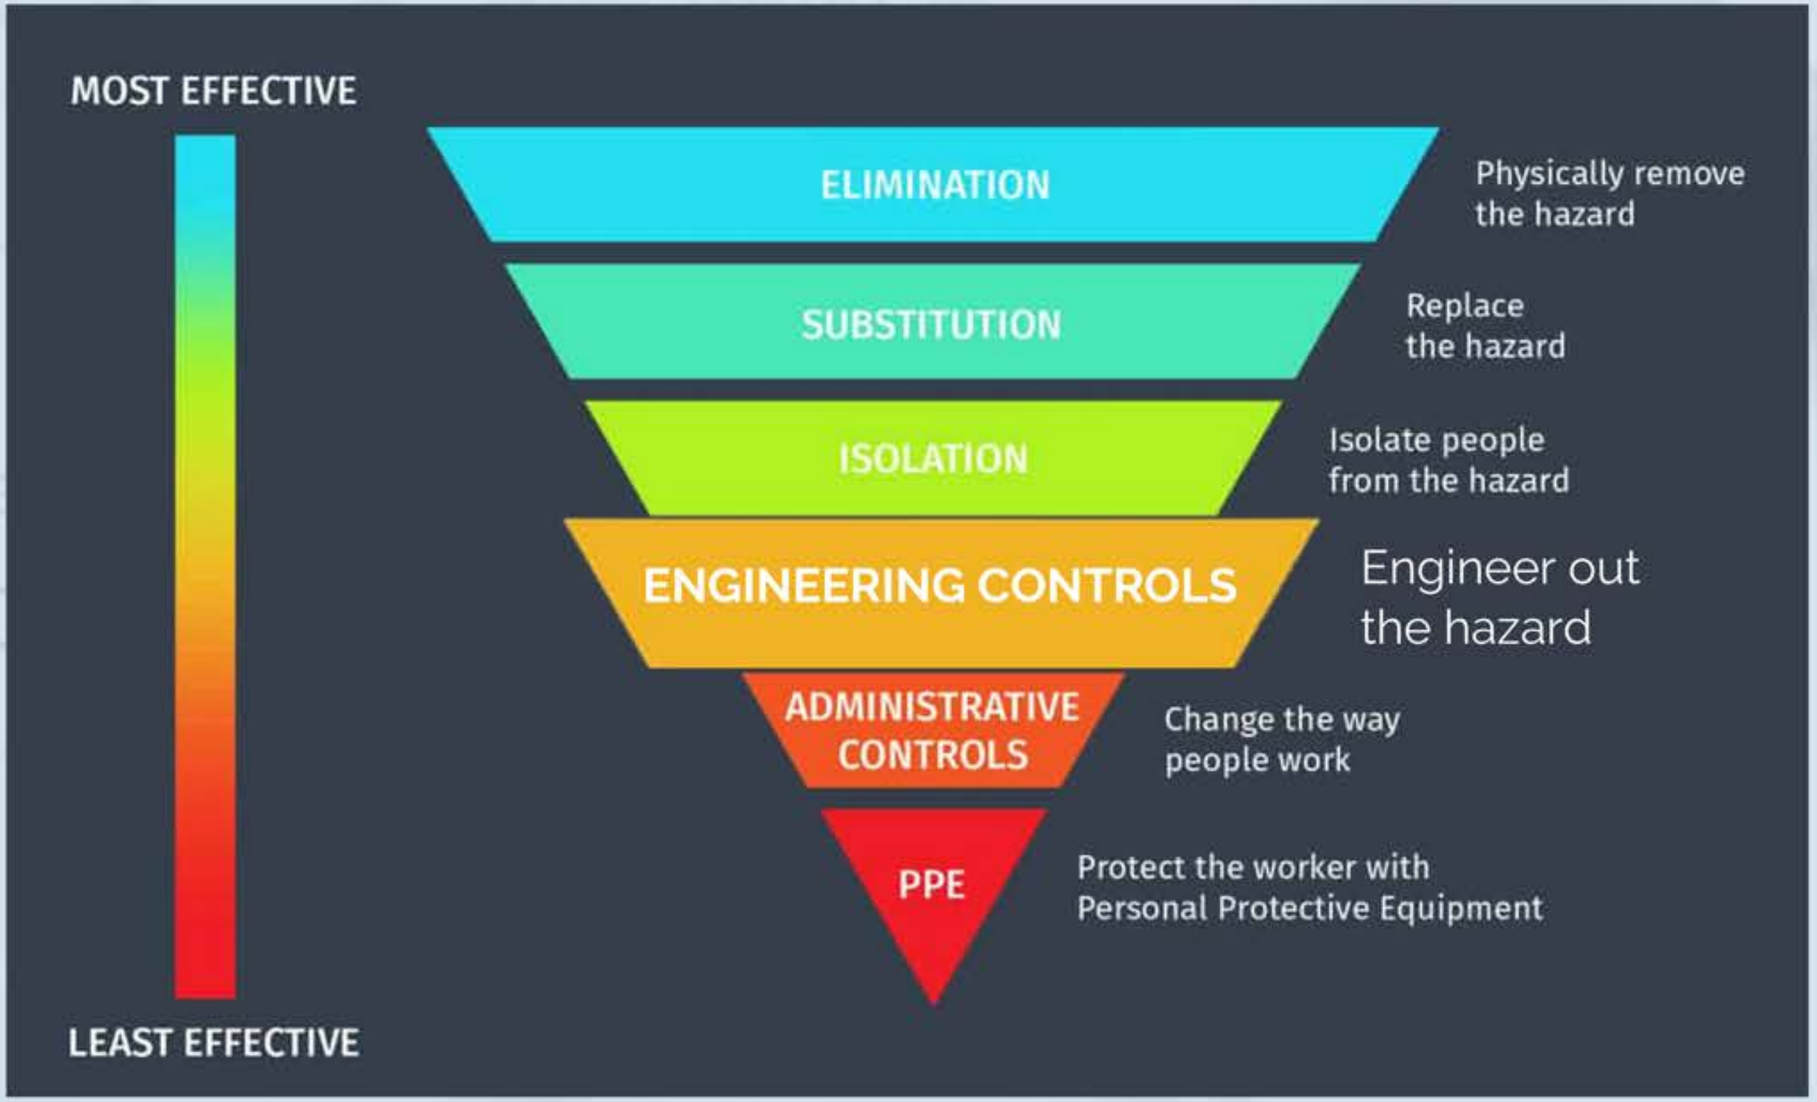
ADMINISTRATIVE

- Methods and procedures to limit exposure to hazards
- E.g. traffic signs or cones to warn people of a hazard

PPE

- Personal Protective Equipment (Helmets, gloves, Hi-Vis, glasses)
- Least effective form

HIERARCHY OF CONTROLS



WORKING AT HEIGHTS - CONTROLS

- Edge protection
- Harnesses
- Training and competent persons
- Lanyards
- PPE
